Art Unit: 1742

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 1-37 are rejected under 35 U.S.C. 103(a) as being unpatentable over EPO 0170598 ('598).

'598 discloses the invention substantially as claimed. '598 discloses a martensitic stainless steel comprising all of the claimed components as disclosed by Applicant. Furthermore, '598 discloses ranges of claimed components that completely overlap the claimed ranges, except for Cr, which substantially overlaps that as claimed, falling short of the upper limit.

Art Unit: 1742

The overlap of the claimed ranges establishes a prima facie case of obviousness, including the approximation of the range of Cr, where it is known in the art to those of ordinary skill to increase the amount of Cr in the alloy based on the amount of other alloying elements to obtain alloys of high corrosion resistance.
